## **AMENDMENTS TO THE CLAIMS**

1	1.	(Currently Amended) A method, employing a browser in data communication	
2	over a netwo	rk with a server, for determining a price of a product, said server having a plurality	
3	of addresses	in an address space associated therewith, said method comprising:	
4	displa	lying information concerning said product in a browser window, said information	
5		including a first offered price data of said product;	
6	agreeing to said first offered price data by transmitting product-related information to the		
7		server for storage in a subportion of said plurality of server addresses, wherein	
8		said transmitted product-related information includes said first offered price data	
9		of the product and wherein the subportion of said plurality of server addresses is	
10		associated with an identification code corresponding to a user of the browser,	
11		wherein the agreed to offered price data defines agreed price data; and	
12	changing said agreed price data of said product to a second offered price data of said		
13		product in response to an event.	
1	2.	(Previously Presented) The method as recited in claim 1 wherein said event is a	
2	predetermine	d event that includes expiration of a preset amount of time.	
1	3.	(Previously Presented) The method as recited in claim 1 wherein said event is a	
2	predetermine	d event that includes disassociating said information from said subportion of said	
3	plurality of addresses.		
1	4.	(Original) The method as recited in claim 1 wherein said information corresponds	
2	to characteristics of an automobile.		
1	5.	(Original) The method as recited in claim 1 wherein said information corresponds	
2	to characteristics associated with an automobile, and said changing said agreed price comprises:		
3	varying said characteristics.		
1	6.	(Previously Presented) The method as recited in claim 2 wherein said preset time	

2

is in a range of one to ten days.

	7.	(Previously Presented) The method as recited in claim 1 wherein said first			
offered price data includes information includes taxes associated with a geographic region and a					
manufacture's suggested retail price(MSRP), and said changing said agreed price data					
comp	rises:				

varying said MSRP independently of said taxes.

1 2

3 .

	8. (Currently Amended) A computer system comprising:			
a processor, configured to operate a browser;				
	a network interface, coupled to said processor and coupled to a server via a network,			
	wherein said network interface permits said browser to be in data communication			
	over said network with said server and said server has a plurality of addresses in			
	an address space associated therewith;			
computer readable medium coupled to said processor; and				
	computer code, encoded in said computer readable medium, for determining a price of a			
	product by virtue of being configured to cause said processor to:			
	display information concerning said product in a browser window, said display			
	information including first offered price data of said product; and			
	permit agreement to said first offered price data by transmitting product-related			
	information to the server for storage in a subportion of said plurality of			
	server addresses, wherein said transmitted product-related information			
	includes said first offered price data of the product and wherein the			
	subportion of said plurality of server addresses is associated with an			
	identification code corresponding to a user of the browser, wherein the			
	agreed to offered price data defines agreed price data of said product and			
	said agreed price data changes to second offered price data of said product			
	in response to an event.			

9. (Previously Presented) The computer system as recited in claim 8 wherein said event is a predetermined event that includes expiration of a preset amount of time.

- 1 10. (Previously Presented) The computer system as recited in claim 8 wherein said 2 event is a predetermined event that includes disassociating said information from said subportion 3 of said plurality of addresses.
  - 11. (Original) The computer system as recited in claim 8 wherein said information corresponds to characteristics of an automobile.
  - 12. (Original) The computer system as recited in claim 8 wherein said information corresponds to characteristics associated with an automobile, and said computer code configured to cause said processor to change said agreed price is further configured to cause said processor to:
- 5 vary said characteristics.

- 13. (Previously Presented) The computer system as recited in claim 9 wherein said preset amount of time is in a range of one to ten days.
- 14. (Previously Presented) The computer system as recited in claim 8 wherein said first offered price data includes information includes taxes associated with a geographic region and a manufacture's suggested retail price(MSRP), and said computer code configured to cause said processor to change said agreed price data is further configured to cause said processor to:

  vary said MSRP independently of said taxes.
- 15. (Currently Amended) A computer program product storage medium for operation on a server computer system in data communication over a network with at least one client computer system employing a browser application, the computer program product comprising code for determining a price of a product, said server computer system having a plurality of addresses in an address space associated therewith, said computer product program storage medium comprising:
  - for each client computer system:

δ		code to provide display information to said browser application concerning said
9		product, said display information including a first offered price data of
0		said product;
1		code to associate a subportion of said plurality of server addresses with an
2		identification code corresponding to said client system;
3		code to receive product-related information from said client computer system
4		indicating an acceptance of said first offered price data, wherein said
5		received product-related information includes said first offered price data
6		of the product;
7		code to store said product-related information in said subportion of said plurality
8		of server addresses, wherein the accepted offered price defines agreed
9		price data; and
20		code to change said agreed price data of said product to second offered price data
21		of said product in response to an event.
1	16.	(Currently Amended) The computer program product storage medium as recited
2	in claim 15 v	wherein event is a predetermined event that includes expiration of a preset amount of
3	time	
1	17.	(Currently Amended) The computer program product storage medium as recited
2	in claim 15 v	wherein said event is a predetermined event that includes disassociating said
3	information	from said subportion of said plurality of addresses.
1	18.	(Currently Amended) The computer program product storage medium as recited
2	in claim 15 v	wherein said information corresponds to characteristics of an automobile.
1	19.	(Currently Amended) The computer program product storage medium as recited
2	in claim 15 v	wherein said information corresponds to characteristics associated with an
3	automobile,	and said code that changes said agreed price data comprises:
4	code to vary said characteristics.	

- 1 20. (Currently Amended) The computer program product storage medium as recited 2 in claim 16 wherein said preset amount of time is in a range of one to ten days.
  - 21. (Currently Amended) The computer program product storage medium as recited in claim 15 wherein said first offered price data includes information includes taxes associated with a geographic region and a manufacture's suggested retail price (MSRP), and said code that changes said agreed price data comprises:
    - code to vary said MSRP independently of said taxes.

- 22. (Currently Amended) An apparatus, employing a browser in data communication over a network with a server, for determining a price of a product, said server having a plurality of addresses in an address space associated therewith, said method comprising:
- means for displaying information concerning said product in a browser window, said information including a first offered price data of said product;
- means for agreeing to said first offered price data by transmitting product-related information to the server for storage in a subportion of said plurality of server addresses, wherein said <u>transmitted</u> product-related information includes said first offered price data of the product and wherein the subportion of said plurality of server addresses is associated with an identification code corresponding to a user of the browser, wherein the agreed to offered price data defines agreed price data; and
- means for changing said agreed price data <u>of said product</u> to second offered price data <u>of</u>

  said product in response to an event.
  - 23. (Previously Presented) The apparatus as recited in claim 22 wherein said event is a predetermined event that includes expiration of a preset amount of time.
  - 24. (Previously Presented) The apparatus as recited in claim 22 wherein said event is a predetermined event that includes disassociating said information from said subportion of said plurality of addresses.

1 25. (Original) The apparatus as recited in claim 22 wherein said information 2 corresponds to characteristics of an automobile. 26. (Previously Presented) The apparatus as recited in claim 23 wherein said 1 2 information corresponds to characteristics associated with an automobile and said means for 3 changing said agreed price data comprises: 4 means for varying said characteristics. 1 27. (Previously Presented) The apparatus as recited in claim 23 wherein said preset 2 amount of time is in a range of one to ten days. 1 28. (Previously Presented) The apparatus as recited in claim 22 wherein said first 2 offered price data comprises information includes taxes associated with a geographic region and 3 a manufacture's suggested retail price(MSRP), and said means for changing said agreed price 4 data comprises: 5 means for varying said MSRP independently of said taxes. 1 29. (Canceled). 1 (Canceled). 30. 1 31. (Canceled). 32. 1 (Canceled). 1 33. (Canceled). 1 (Canceled). 34. 1 35. (Previously Presented) The method as recited in claim 1 wherein said event 2 corresponds to a change in a specification of said product.

- 1 36. (Previously Presented) The computer system as recited in claim 8 wherein said 2 event corresponds to a change in a specification of said product. 1 37. (Previously Presented) The computer program product as recited in claim 15 2 wherein said event corresponds to a change in a specification of said product. (Previously Presented) The apparatus as recited in claim 22 wherein said event 1 38. 2 corresponds to a change in a specification of said product. 39. 1 (Currently Amended) A method of operating a server computer system for 2 determining a price of a product, said server computer system having a plurality of addresses in 3 an address space associated therewith and said server computer system is in data communication
  - for each client computer system:

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

comprising:

providing display information to said browser application concerning said product, said information including a first offered price data of said product;

over a network with at least one client system employing a browser application, the method

- associating a subportion of said plurality of server addresses with an identification code corresponding to said client system;
- receiving product-related information from said client computer system indicating an acceptance of said first offered price data, wherein said <u>received</u> product-related information includes said first offered price data of the product and;
- storing said <u>received</u> product-related information in said subportion of said plurality of server addresses, wherein the accepted offered price defines agreed price data; and
- changing said agreed price data <u>of said product</u> to second offered price data <u>of said product</u> in response to an event.

(Previously Presented) The method as recited in claim 39 wherein event is a 1 40. 2 predetermined event that includes expiration of a preset amount of time 1 41. (Previously Presented) The method as recited in claim 40 wherein said preset 2 amount of time is in a range of one to ten days. 42. (Previously Presented) The method as recited in claim 39 wherein said event is a 1 2 predetermined event that includes disassociating said information from said subportion of said plurality of addresses. 3 1 43. (Previously Presented) The method as recited in claim 39 wherein said 2 information corresponds to characteristics of an automobile. 1 44. (Previously Presented) The method as recited in claim 39 wherein said 2 information corresponds to characteristics associated with an automobile, and said code that 3 changes said agreed price data comprises: 4 code to vary said characteristics. 1 45. (Previously Presented) The method as recited in claim 39 wherein said first 2 offered price data includes information includes taxes associated with a geographic region and a 3 manufacture's suggested retail price(MSRP), and said code that changes said agreed price data 4 comprises: 5 code to vary said MSRP independently of said taxes. 1 46. (Previously Presented) The method as recited in claim 39 wherein said event 2 corresponds to a change in a specification of said product. 1 47. (Previously Presented) The method as recited in claim 1 wherein agreement to 2 said price is effected by storing said product-related information in said subportion of said

3

addresses associated with said server.

- 1 48. (Previously Presented) The computer system as recited in 8 wherein agreement to 2 said price is effected by storing said product-related information in said subportion of said 3 addresses associated with said server.
- 1 49. (Currently Amended) The computer program product storage medium as recited 2 in claim 15 wherein agreement to said price is effected by storing said product-related 3 information in said subportion of said addresses associated with said server.
- 1 50. (Previously Presented) The apparatus as recited in claim 22 wherein agreement to 2 said price is effected by storing said product-related information in said subportion of said 3 addresses associated with said server.
- 1 51. (Previously Presented) The method of claim 39 wherein agreement to said price 2 is effected by storing said product-related information in said subportion of said addresses 3 associated with said server.
